Beka Chokuri

Data Analyst / Developer

SUMMARY

High-performance Data Analyst with a background in complex statistical modeling and data engineering, driven by a passion for solving complex business challenges. Proven track record of optimizing operational efficiency and architecting robust ETL pipelines for large-scale data missions. Adept at translating high-volume datasets into actionable strategic insights using Python, SQL, and Power BI. Experienced in high-pressure environments—from securing 1st place in international hackathons to managing nationwide real-time data ingestion. Eager to apply statistical rigor and machine learning concepts to drive organizational growth and optimize decision-making processes.

SKILLS

- SQL
- Python
- Bower BI (DAX)
- Tableau
- Qlik Sense
- Microsoft Excel
- ETL
- Data Managment
- Machine Learning & Statistics

WORK EXPERIENCE

Bank of Georgia
Oct 2023 - Jan 2025

Analyst Developer
Automated loan disbursement for efficiency. Enhanced processes with tech skills. Collaborated across Risk, Business, and Data teams.

Bivision
Aug 2022 - Aug 2023

BI Analyst
Led data retrieval and analysis, generated insightful reports and dashboards through BI, collaborated with management for data-driven insights.

National Bank of Georgia
Jun 2022 - Aug 2022

Data Analyst Intern
Enriched data analysis skills during an internship at Monetary Statistics Division, focusing on data processing and visualization using SQL and Tableau tools.

PROJECTS

Data Analytics

2024 - Current

Georgia's Future Academy

- Engineered an end-to-end ETL pipeline to streamline observer recruitment for a coalition of 30+ organizations.
- Led a data team to manage and process the largest nationwide election monitoring mission in Georgia.
- Co-authored economic research by aggregating complex trade, migration, and financial datasets.
- Conducted rigorous market analysis to translate statistical findings into policy oriented narratives.

Data Analytics

Oct 2024 - Jun 2025

EPAM

- Architected 3NF Data Warehouses using PostgreSQL and advanced SQL window functions.
- Built automated ETL pipelines with Python and AWS to manage incremental data loading.
- Implemented DQE and Test Automation to ensure strict validation and cleansing.
- Visualized KPIs through Power BI reports and OLAP data modeling.
- Applied SCD2 standards to track historical changes and maintain data integrity.

Data Science Project Participant
Feb 2022 - Jul 2022

Forset

- Mastered Python basics. Pandas, Numpy, Matplotlib and Seaborn.
- Used Machine Learning and Deep Learning techniques.

EDUCATION

ISET - International School of Economics at TSU
Bachelor / 2019-2023
